

WE NEVER COMPROMISE SAFETY. We are committed to safe people and safe projects. At W-3, our Team insists on safety and believe that safety training and daily safety records should be a part of every project. Safety is our top priority every day, on every job site and we believed that accident prevention is accomplished through the coordinated efforts of our employees, our subcontractors and owner representatives. To accomplish this task we have a Safety Director, to oversee, implement and maintain our safety programs. All W3 personnel and subcontractors are required to follow the procedures and participate in continuing education classes.

Our Safety program and training practices continually updated from year to year and from client to client. It is W3's commitment to keep our safety practices relevant to the project and most current to the efficient operation of the project. Rules and regulations are the cornerstone of our safety and health program. They are designed for the convenience and protection of all, and to achieve a more efficient and successful project. We recognize that a good safety record is evidence of good management.

Our record speaks for itself with an EMR below the industry average and declining as we work more hours' accident free.

W-3 Components to Safety

- All must comply with M.I.O.S.H.A. and all federal, state and local safety regulations that pertain to construction
- Site specific Safety Plans, Orientations and Inspections
- CPR Certification and Drug Testing
- W-3 complies with the MUST 30 hour Safety Program – Our employees completed Safe 2 Work modules are being transferred to the MUST Safety Program
- Make readily available MSDS at the job site
- Comprehensive Safety Manual

W-3 and our Safety Director welcome MIOSHA to our job sites we support their goal to assure the safety and health of workers.
